

Exercise title

EX-WPFRestClient-Phase6

Type of Application

Console Application

Overview

You are to create a Console application that acts as a REST client for a Shopping Cart API. The shopping cart REST service application is provided and I'll show you how it works. The Console client application will **Update a Shopping Cart.**

Test that it can,

- Update the Cart Number
- Update the Customer Name.
- Add items to a Cart.
- Remove Items from the Cart.
- Change Cart Items

Use Swagger to confirm that the Update works.

TIP: Restart the API service to rebuild the database.

GitHub

We'll all be sharing the same repo and you need to create your solution in a folder that matches your name.

Please use the **exercises repo** we used for the first exercise

1. Create a new local branch
2. Checkout the branch
3. Add your application code
4. Stage the files to Git
5. Commit the changes locally
6. Push the changes to the remote origin (branch)
