

Exercise title

EX-WPFRestClient-Phase3

Type of Application

Console Application

Overview

You are to create a Console application that acts as a REST client for a Shopping Cart API. The shopping cart REST service application is provided and I'll show you how it works. The Console client application will **Add a new Shopping Cart**

Use Swagger to confirm that the delete works.

GitHub

We'll all be sharing the same repo and you need to create your solution in a folder that matches your name.

Please use the **exercises repo** we used for the first exercise

1. Create a new local branch
2. Checkout the branch
3. Add your application code
4. Stage the files to Git
5. Commit the changes locally
6. Push the changes to the remote origin (branch)

Clues:

- My Examples

04-REST-Client-AddTown	This example is a client application that calls a REST service to add a new town
